

# HARLAN T WOOD

AI-CURIOUS ENGINEERING LEADER

## SUMMARY

- 20+ years pioneering software development across blockchain, AI, and decentralized systems
- Proven track record of developer productivity improvements through innovative tooling and AI integration
- Expert technical leader who builds high-performing teams while staying hands-on with code
- Champion of engineering excellence through test automation, CI/CD optimization, and cutting-edge practices
- Visionary architect of open-source projects advancing decentralized trust and reputation systems
- Polyglot developer and rapid learner who bridges emerging technologies with practical solutions
- Passionate about leveraging technology to create positive global impact through projects like [Trust Graph](#) and CoreNexus
- Certified practitioner of Agile, XP, Lean, Holacracy, and other transformative methodologies

“Harlan is an expert agile leader and software craftsman. He is gifted at perceiving business value, establishing processes to actualize it, and leading cross-team conversations to support it. He has an impeccable personal integrity that generates good will, good results, and good luck. I value any opportunity to work with Harlan and I recommend him highly.”

— Noah Thorp, CEO, Upside

## EXPERIENCE

- Current  
|  
2024
- Principal Consultant**  
Heaven on Earth Consulting 📍 Remote
    - Architected and implemented comprehensive AI solutions including LLM integration, transcription, voice to voice
    - Developed Next.js/React applications with automated testing, HIPAA compliance, and Supabase integration
    - Built and deployed open-source AI interviewer system using WASM for enhanced performance and offline capabilities
    - Engineered real-time voice-to-voice AI systems leveraging OpenAI's Realtime API
    - Led technical architecture decisions, including security and compliance considerations
- 2024  
|  
2018
- Principal Architect / Consultant / Tech Lead**  
SharesPost / Forge Global 📍 Remote
    - Led development team, implementing GitHub Codespaces from scratch to reduce developer environment setup time from days to minutes, boosting team productivity and expediting new developer onboarding
    - Directed the complete migration of CI/CD pipelines from CircleCI to GitHub Actions, cutting build times, reducing operational costs, and streamlining workflow management by eliminating the need for a complex DSL, improving team efficiency
    - Trained and mentored team members in testing best practices, fostering a culture of high-quality code through consistent test writing and maintenance, accelerating issue resolution and improving code reliability
    - Established and enforced a content security policy for the Rails application, leading team efforts to strengthen platform security and protect against critical vulnerabilities
    - Spearheaded the adoption of Kubernetes and Tilt for reproducible, multi-cloud infrastructure, enabling seamless project deployments across diverse cloud environments and enhancing system resilience
- 2018  
|  
2016
- Principal Consultant**  
Nodesphere Studio 📍 Remote
    - Created the WorkNation prototype for decentralized, cryptographically signed workplace attestations with Cisco, Institute for the Future, and TrustGraph, leveraging UPort on the Ethereum blockchain
    - Built custom integrations with third-party paycheck provider APIs for WageConnect, enabling revenue generation through direct ADP integration in the Paycheck Workstream
    - Implemented cryptographic signing of JSON-LD data using Bitcoin private keys for BlockStream, advancing secure data transfer practices
    - Refactored a legacy codebase, added comprehensive tests, and trained developers for Zozi, helping to rescue the platform from maintenance challenges and ensuring long-term code quality

## CONTACT INFO

📍 Haiku, Hawai'i

## SKILLS

- LLM Integration
- AI Developer Tools
- RAG Systems
- Voice AI
- Image Generation
- Ruby
- Rails
- TypeScript
- SQL
- React
- Python
- Rust
- Elixir
- Phoenix
- D3
- three.js
- WebGL
- Tech Architecture
- Dev Productivity
- Test Automation
- System Design
- Tech Leadership
- Dev Mentorship

|                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## RECOMMENDATIONS

- “ If Harlan Wood is seeking to work his magic for you, and you decide to go forward, simply put, you will never regret it. He is a person of enormous character, vitality, and warmth, with vast technical talent, extensive creative gifts, and the **discipline and impact of a seasoned master**. A person of this stature makes all the difference in a pioneering technical effort.

— Jim McCarthy, CEO, McCarthy Technologies ”
- “ Harlan is one of those too-rare people who can **see what needs to be done, how to cut the problem down into bite-sized pieces, and then knock the code out of the ballpark**. Both a pragmatic programmer and an agile project manager, I'd work with him again on any project that needs a guy who makes things happen!

— Christina Wodtke, Principal Product Manager, LinkedIn ”

● **Harlan is a real leader and expert in agile development methodologies.** It was a real pleasure working with Harlan while at Zozi; he and I had some of the most effective (and fun!) pair programming sessions I've ever experienced. Harlan is focused on delivering value to the business in the most effective way possible. Harlan is great at mobilizing and managing teams, as well as in interacting with the non-engineering folks in a company, getting both groups into alignment and onto the same page. Harlan is also **extremely effective with the softer sides of software development; he's very in tune with team dynamics and morale**, and with the individual needs and concerns of the engineers on his team. Harlan is an extremely solid and proficient technical leader; I highly recommend him.

— Greg Woodward, CTO, Zozi

● **Harlan is a powerful developer with a heart of gold.** I have talked often with Harlan about his desire to benefit society through his "superpowers" of programming, and to this end **he has spent much of his free time developing open source projects and protocols.** Harlan learns new technologies quickly and he works hard implementing what needs to be implemented. I would certainly work with him again given the chance and he would be a great asset to any development team.

— Duke Jones, Platform Architect, Good Money

● **Harlan has been an amazing mentor for many years.** He introduced me to the core principles and practices of Extreme Programming, skills I rely heavily on in my daily work. **Harlan cares deeply about people, and that shows in everything he does.** He's passionate about building excellent tech, implementing next-level best practices, and innovating towards the future. Some of the most exciting work I've ever done has been in collaboration with him.

— Jack Senechal, Principal Software Engineer and Team Lead, Mavenlink

● **Harlan seamlessly integrates advanced programming techniques, human psychology, and extraordinary skills** into practical visions and projects. For any software or creative systems development, Harlan is my first choice for consultation, creation of a critical-path, and implementation of the project.

— Adam Apollo, Creative Systems Architect, Access Granted, Inc

● **Harlan is detail oriented and doesn't let anything fall through the cracks.** He is proactive in getting his people together to have those tough conversations. Harlan is very much **an advocate of transparency and is able to report the appropriate level of information to the right people**, so they in turn can stay on the pulse of the project. Harlan has been fantastic to work with and I would be honored to work with him on a project again.

— Rodney Carvalho, Co-Founder, Internaut Design

● **Harlan's positive and friendly attitude combined with his experience with agile development practices make him a great team member on critical, time-sensitive projects.** As a developer, his decision making process always focuses first on delivering business value, and keeping the team on track to **deliver quality, tested software**. He introduced many agile practices at Wireless Generation, leading the creation of the infrastructure and test cases for automated web acceptance tests. Aware of the challenges faced in **introducing change** Harlan created **highly visible project metrics** to keep product owners constantly informed of story progress and code quality. His friendly personality and creative energy always made pairing sessions fun, and I'd welcome the chance to work with him again.

— Daniel Wellman, Senior Software Engineer, Cyrus Innovation

● **Harlan was a progressive force in the company, promoting agile practices and helping us improve the way we made software.** Harlan quickly developed an automated build process; In retrospect I don't know how we got by without an automated build. He set up code metrics, promoted unit tests, and a concern for developing high quality software. More than anything, Harlan brings a **passion for developing software the right way.**

— Gabe Yarra, Senior Software Engineer, Wireless Generation

● **Harlan's intelligence, professionalism, talent and genuine interest in software development** not to mention his warmth, wit, and consideration for others – make him an excellent developer, and a pleasure to work with. His **considered, lateral and focused approach to his work is a true asset**, as is his ability to communicate very effectively. We were sad to see him leave to return to the US. I have no hesitation in recommending Harlan to any organization seeking a developer, and person, of very high quality.

— Rory Buck, Owner/Director, Evolutia Pty. Ltd.

● **Harlan is one of the most intelligent and talented people I have taught in 24 years** of teaching at UTS. He studied a number of my computer graphics electives, where he was an enthusiastic and imaginative student with outstanding programming abilities. Harlan is an outstanding person who is friendly, outgoing, and articulate. You should grab him before somebody else does.

— Dr. Kevin Suffern, Senior Lecturer, University of Technology Sydney
